Systems of two degree of freedom

- ◆ The two masses translate in the horizontal direction
- ◆ Given:
 - two masses m
 - 3 linear springs with stiffness coefficient k
- ◆ Using free body diagram for each mass the equations of motion are set up

Coupled the second-order differential equations

- Diamond Differential equation of the 2nd order

$$m\ddot{x}_1 + kx_1 + k(x_1 - x_2) = F_0 \sin \omega t$$

$$m\ddot{x}_2 + kx_2 - k(x_1 - x_2) = 0$$

$$m\ddot{x}_1 + 2kx_1 - kx_2 = F_0 \sin \omega t$$

$$m\ddot{x}_2 - kx_1 + 2kx_2 = 0$$

- Diamond Assumed solutions in the form

$$x_1 = a_1 \sin \Omega t$$

$$x_2 = a_2 \sin \Omega t$$

- Diamond Differentiating previous eqs twice with respect to time:

$$\ddot{x}_1 = -a_1 \Omega^2 \sin \Omega t = -\Omega^2 x_1$$

$$\ddot{x}_2 = -a_2 \Omega^2 \sin \Omega t = -\Omega^2 x_2$$

- Diamond Solution of natural frequencies of the systems - homogenous systems ($F_0=0$)

$$m\ddot{x}_1 + 2kx_1 - kx_2 = 0$$

$$m\ddot{x}_2 - kx_1 + 2kx_2 = 0$$

(1)

- Diamond Substituting into equations (1):

$$-m\Omega^2 x_1 + 2kx_1 - kx_2 = 0$$

$$-m\Omega^2 x_2 - kx_1 + 2kx_2 = 0$$

Natural frequencies

System of the linear algebraic equations - homogenous

$$(2k - m\Omega^2)x_1 - kx_2 = 0$$

$$-kx_1 + (2k - m\Omega^2)x_2 = 0$$

System of equations has nontrivial solutions if and only if the determinant of the coefficients of a_1 and a_2 is equal to zero:

$$D = \begin{vmatrix} 2k - m\Omega^2 & -k \\ -k & 2k - m\Omega^2 \end{vmatrix} = 0$$

which yields

$$(2k - m\Omega^2)^2 - k^2 = 0$$

$$4k^2 - 4km\Omega^2 + m^2\Omega^4 - k^2 = 0$$

◆ Quadratic equation in Ω^2

$$\Omega^4 - 4\frac{k}{m}\Omega^2 + 3\left(\frac{k}{m}\right)^2 = 0$$

◆ Signed

$$\frac{k}{m} = \Omega_0^2$$

◆ Biquadratic equation

$$\Omega^4 - 4\Omega_0^2\Omega^2 + 3\Omega_0^4 = 0$$

◆ Roots of equation

$$\Omega_{1,2}^2 = \frac{4\Omega_0^2 \pm \sqrt{16\Omega_0^4 - 12\Omega_0^4}}{2}$$

Natural frequencies

There are two solutions, one associated with the first natural frequency and the second associated with the second natural frequency

$$\Omega_{1,2}^2 = 2\Omega_0^2 \pm \Omega_0^2$$

$$\Omega_1^2 = \Omega_0^2$$

$$\Omega_2^2 = 3\Omega_0^2$$

$$\Omega_1 = \Omega_0 = \sqrt{\frac{k}{m}}$$

$$\Omega_2 = \sqrt{3}\Omega_0 = \sqrt{3} \sqrt{\frac{k}{m}}$$

Mode shapes (principal modes of vibration)

- ◆ Two equations provide the same ratio between x_1 and x_2
- ◆ Ratios (3) and (4) are called mode shapes or principal modes of vibration

$$(2k - m\Omega^2)x_1 - kx_2 = 0 \quad (2a)$$

$$-kx_1 + (2k - m\Omega^2)x_2 = 0$$

- ◆ That is from (2a)

$$\left(\frac{x_2}{x_1}\right)_{1,2} = \frac{2k - m\Omega_{1,2}^2}{k} = 2 - \frac{\Omega_{1,2}^2}{\Omega_0^2}$$

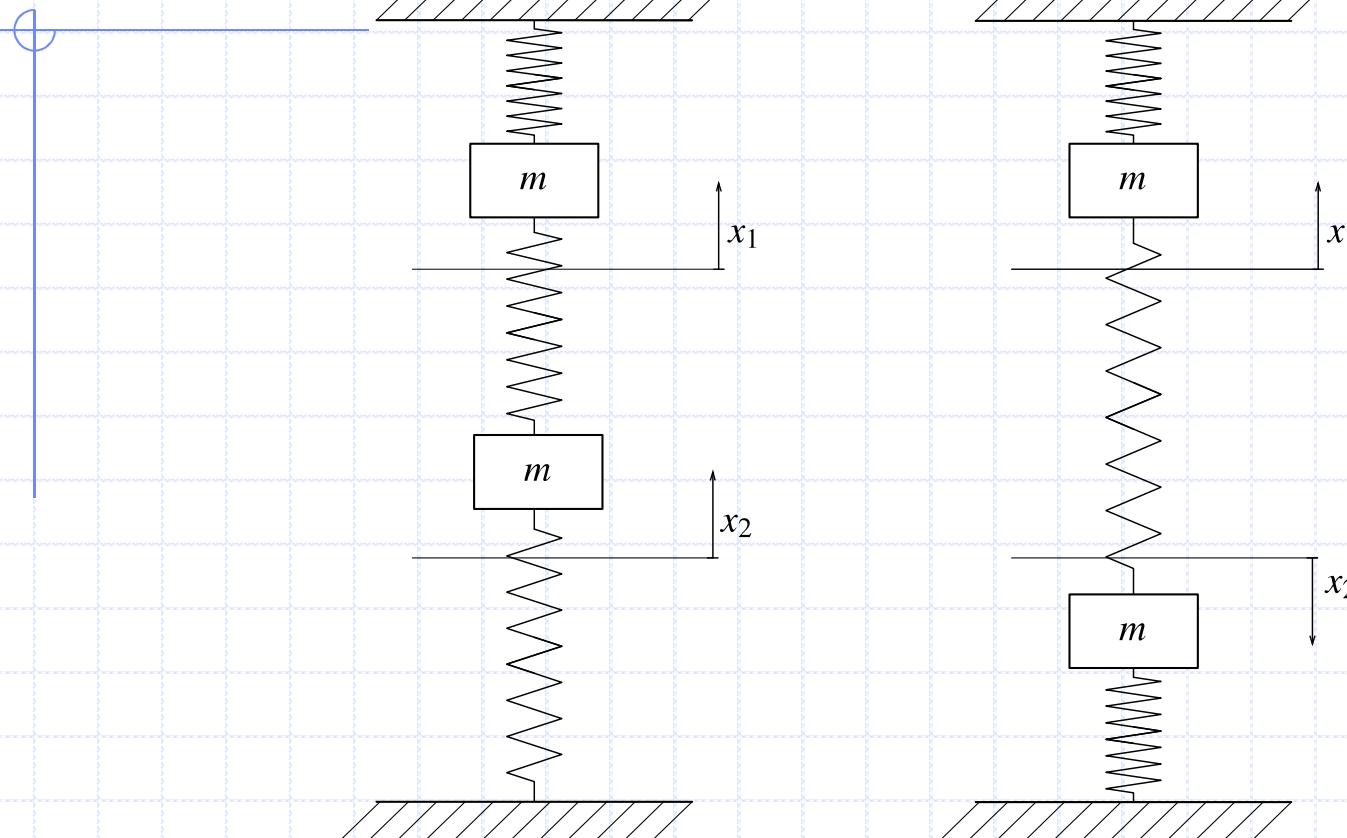

$$\left(\frac{x_2}{x_1}\right)_1 = 2 - 1 = 1 \quad (3)$$

$$\left(\frac{x_2}{x_1}\right)_2 = 2 - 3 = -1 \quad (4)$$

$$\left(\frac{x_2}{x_1}\right)_1 = 1$$

$$\left(\frac{x_2}{x_1}\right)_2 = -1$$

Mode shapes

1st mode shape

2nd mode shape

Free vibration

- The complete solution can be obtained by summing the two solutions

$$x_1(t) = A_1 \cos \Omega_1 t + B_1 \sin \Omega_1 t + A_2 \cos \Omega_2 t + B_2 \sin \Omega_2 t \quad (5)$$

$$x_2(t) = \left(\frac{x_2}{x_1} \right)_1 \left(A_1 \cos \Omega_1 t + B_1 \sin \Omega_1 t \right) + \left(\frac{x_2}{x_1} \right)_2 \left(A_2 \cos \Omega_2 t + B_2 \sin \Omega_2 t \right) \quad (6)$$

- In eqs (5), (6), there are four constants A_1, B_1, A_2, B_2 which can be determined using the initial conditions

$$\left. \begin{array}{l} x_1(0) = x_{10} \\ \dot{x}_1(0) = \dot{x}_{10} = v_{10} \\ x_2(0) = x_{20} \\ \dot{x}_2(0) = \dot{x}_{20} = v_{20} \end{array} \right\}$$

at least one of the conditions must be nonzero
